

TRAVIS DICKENS

JUNIOR SOFTWARE DEVELOPER

071 575 6685 | Travis.Dickens@outlook.com | [Linkedin](#) | [GitHub](#) | [Personal Portfolio](#)

SUMMARY

I am a junior software developer with full-stack development skills and a passion for building practical, data-driven solutions. I have experience working across front-end and back-end technologies, integrating APIs, and applying AI and machine learning concepts to real-world problems. I thrive in Agile, collaborative environments and enjoy complex problems that push my technical growth. I am particularly motivated by projects with real world impact, where I can contribute to high-quality solutions while continuously learning and improving as a developer.

TECHNICAL SKILLS

FRONT-END SKILLS	BACK-END SKILLS	DATABASES	Version Control	Tools and Frameworks
HTML	Java	MySQL	Git	.NET
CSS	C#	NoSQL	GitHub	Spring Boot
JavaScript	Python	PostgreSQL		Docker
React.js	Restful APIS	Oracle		SonarQube
Next.js				Azure

PROFESSIONAL EXPERIENCE

AI/ML Learnership - Forvis Mazars

Aug 2025 – Present

As part of an AI/ML learnership within the Innovation and Technology Hub under the advisory department, my role involves:

- Building and studying AI/ML models that enhances and improves various departments.
- Contributing to and leading internal software development projects that improve efficiency, automation, and data-driven decision making.
- Collaborating with cross-functional teams within different departments.
- Gaining experience in software development, system design, data analytics, artificial intelligence and machine learning.

EDUCATION

IIE Varsity College (2022 - 2024)

Bachelor of computer and information sciences in application development (Graduated with distinction)

Marburg Secondary School (2017 - 2021)

National Senior Certificate

COURSES

[Software Engineer](#) - HackerRank (April 2025)

[JavaScript Essentials II](#) – Cisco Networking Academy (April 2024)

[Introduction to cybersecurity](#) – Cisco Networking Academy (February 2024)

[JavaScript Essentials I](#) – Cisco Networking Academy (February 2024)

Real-Time Stock Market Analyzer

Java (Spring Boot), JavaScript, HTML, CSS

- A full-stack dashboard that displays real-time candlestick charts and performs technical analysis on market data.
- Has a pattern detection feature (Doji, Engulfing, Hammers, Morning/Evening Stars) and an algorithmic signal generator using moving average crossovers.
- Includes a watchlist system with search options and dynamic chart rendering, multiple timeframes, and responsive chart UI powered by LightweightCharts.
- Backend is built with Spring Boot serving OHLC data via REST APIs, with asynchronous updates and loading states for a smooth user experience.

Fleet Monitoring Platform

Java (Spring Boot), React, PostgreSQL, Docker

- A full-stack real-time fleet monitoring dashboard that visualizes live vehicle movement and operational metrics across Gauteng.
- Simulates 500 vehicles streaming GPS, speed, fuel, and engine temperature data every second via WebSockets.
- Includes a rule-based alerts with severity tiers and cooldown logic to prevent alert flooding.
- Built using Spring Boot and PostgreSQL, exposing REST APIs for historical queries and STOMP WebSocket endpoints for live telemetry streaming.

Fraud Detection and Risk Scoring System

C# (.NET), React, PostgreSQL, Kafka, ML.NET, Docker

- A full-stack real time fraud detection platform simulating 500-750 transactions per minute across South African locations.
- Scores transactions using ML.NET anomaly detection combined with rule-based checks and flags high-risk activity.
- Streams live scored transactions and alerts to a dashboard via SignalR WebSockets.
- Dashboard features interactive risk heatmaps, KPI cards, live alert feeds, transaction by type charts with filterable tables.
- Built with ASP.NET Core Web API, PostgreSQL for historical persistence, and Apache Kafka for event-driven data ingestion.
